Facilities and Resources:

Cattle Housing

- Functioning starter yard located in northeast Missouri that mirrors typical cattle industry management
- Offer 3 pens with in-line bunks and one available pen without in-line bunk
- All pens equipped with automatic water; three pens have shelter
- Each pen capable of housing 60 head in dry-lot environment
- Relationships with other operations capable of leasing dry lots, small grass paddocks, or larger pastures for larger field projects

Cattle Type

- Privately owned cattle with flexibility to manage as desired
- Cattle generally consist of 400 – 600 lb male (mixed steers and bulls) moderate risk beef cattle
- Other types of cattle can be procured depending on project
- Work with several local producers and can facilitate projects requiring other types of cattle including: cow-calf, grazing stocker, and dry-lot backgrounding operations.

Data Management

- Ability to collect a variety of information on cattle including individual weights and pen-level feed consumption
- A custom database is used to record all trial and animal information with individual calf health, profitability and cattle movement tracked
- Statistical analysis can be performed following trial, or data can be exported into spreadsheets for subsequent analysis
- Study design services (including sample size estimations) can be provided
